

INTRODUCING SLANTED CORD & CRINKLE CREPE ON TERRROT I3P 196: WHERE INNOVATION BECOMES NEW PATTERN

The Terrot I3P 196 combines unparalleled productivity with exceptional versatility, setting new benchmarks in pattern technology through continuous innovation. From 8-Lock, Interlock, Fine Rib, to sophisticated structures like Punto di Roma, Milano Rib, Piqué Rodier, or Racer Mesh, the I3P 196 elevates textile production to a new level, delivering maximum efficiency, precision, and process reliability in every application.

NOW NEW: With innovative Slanted Cord and Crinkle Crepe patterns, we demonstrate how the technical advancements of the I3P 196 go hand in hand with creative design. These pioneering structures look woven but are knitted.

SLANTED CORD is a textured knit with diagonal ribs for a modern 3D effect

LOOK & FEEL: structured, slightly raised lines (cord effect, slanted); subtly shiny depending on yarn

KEY BENEFITS: elastic, comfortable, visually striking

APPLICATIONS: sweaters, cardigans, T-shirts, knit dresses

PRODUCTION FLEXIBILITY: various yarn combinations and gauges possible

CRINKLE CREPE is a knit fabric with an irregular, wavy, or lightly crumpled surface

LOOK & FEEL: soft, elastic, often lightly voluminous, dynamic, lightly matte

KEY BENEFITS: stretchable knit retains the crinkle effect, easy-care (often wrinkle-free thanks to crinkle texture), breathable and comfortable on the skin

APPLICATIONS: fashion & apparel: dresses, blouses, shirts, casual wear, swimwear | home & accessories: throw pillow covers

PRODUCTION FLEXIBILITY: various yarn combinations and gauges possible

TERROT INNOVATION LAB

Where technology meets emotion. Knit smarter. Design bolder.
